

Decentralized Cross-Chain Exchange: Empowering Seamless Transactions with Donk Coin

Abstract: This whitepaper introduces a novel cross-chain decentralized exchange (DEX) built on the governance token Donk Coin. The Donk Coin DEX aims to revolutionize the cryptocurrency landscape by enabling frictionless and secure token swaps across multiple blockchain networks. By leveraging the innovative features this DEX provides users with enhanced liquidity, improved privacy, and greater accessibility to a wide range of digital assets.

Introduction: The rise of blockchain technology and cryptocurrencies has opened up new possibilities for peer-to-peer transactions. However, the lack of interoperability between different blockchain networks has hindered seamless token transfers and limited users' access to a diverse range of assets. This whitepaper proposes a cross-chain decentralized exchange powered by Donk Coin, which aims to address these challenges and establish a robust, efficient, and inclusive trading ecosystem.

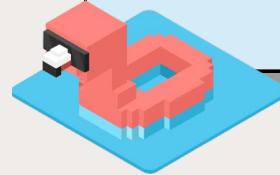

Cross-Chain Interoperability

The DEX facilitates seamless interoperability by integrating with various blockchain networks, including Arbitrum, Polygon MATIC, Solana, Ethereum, and Binance Smart chain. Through the use of innovative cross-chain communication protocols and smart contract technology, users can securely trade assets across different blockchains without the need for intermediaries.

Liquidity Pools

The DEX implements liquidity pools, where users can contribute their assets to provide liquidity and earn rewards. These pools are decentralized and automated, ensuring efficient price discovery and minimal slippage for trades. Liquidity providers are incentivized with Donk Coin rewards, promoting liquidity provision and enhancing overall market depth.

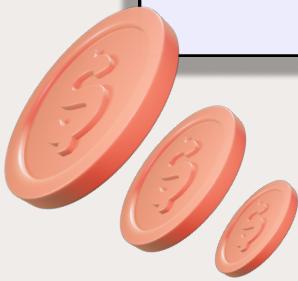

Privacy and Security

The DEX implements state-of-the-art encryption techniques, zero-knowledge proofs, and ring signatures to ensure transaction privacy and prevent sensitive user information from being exposed. The DEX also implements robust security measures continuous monitoring, to safeguard user funds.

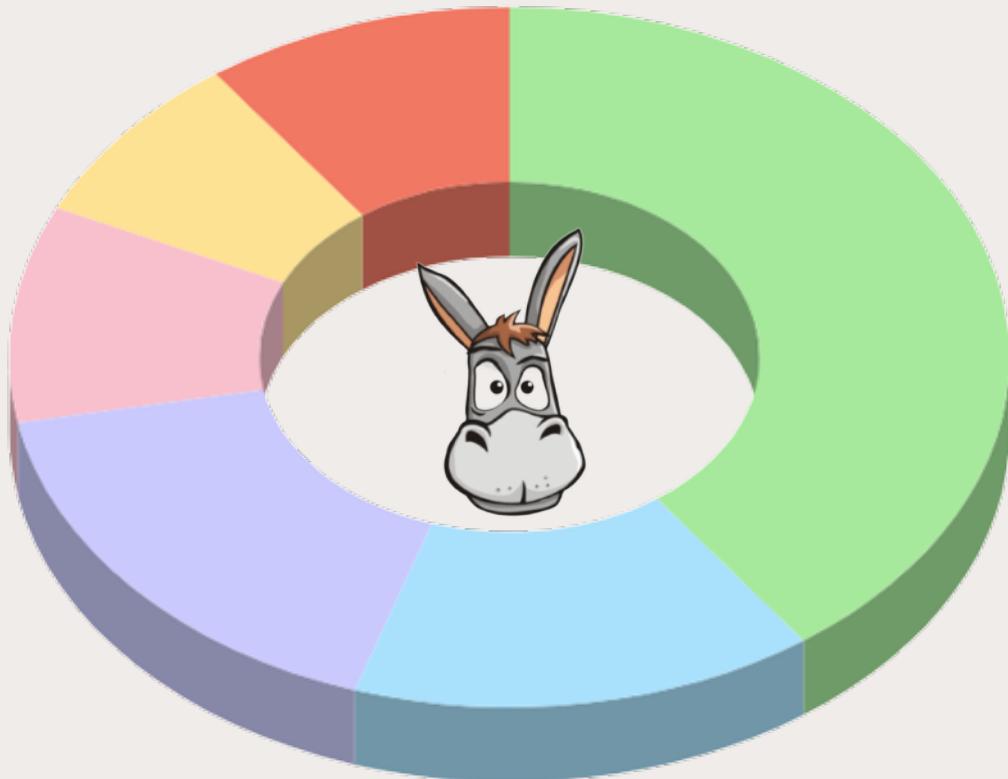

User-Friendly Interface

The DEX offers an intuitive and user-friendly interface, enabling both experienced traders and newcomers to participate seamlessly. Users can connect their wallets and access a comprehensive set of trading tools, including advanced charting, order books, and transaction history, empowering them to make informed trading decisions.

Tokenomics

Donk Coin (DNK) Utility The Donk Coin serves as the native utility token within the DEX ecosystem. DNK token holders can stake their tokens to earn staking rewards and participate in the governance of the DEX by voting on important proposals and protocol upgrades.

ALLOCATION	PERCENTAGE	AMOUNT(DONK)
Mining, farming & Staking Reserve	40%	400,000,000
Partnerships & Airdrops	15%	150,000,000
Team(Lock-up with month to month unlocks)	17%	150,000,000
Liquidity	10%	100,000,000
Community & CEX fund	8%	80,000,000
Burn over 12 months (0.83% per month)	10%	20,000,000
TOTAL	100%	1,000,000,000

ROADMAP

2023

JULY

JULY 1st
DONK DEX Launch with DONK token, Trading & Pooling on ARBITRUM

JULY 7th
DONK Staking launch

JULY 15th
DONK farms launch, create your own custom farms & rewards

AUGUST

AUGUST 1st
Launch of DONK Graphic card mining NFT Mint

AUGUST 15th
Polygon MATIC Cross-chain DEX launch

SEPTEMBER

SEPTEMBER 1st
DONK mining mechanism using NFT's for users to start earning.

SEPTEMBER 7th
DONK airdrop to top 250 holders & stakers based on % holdings of DONK token and NFT's. Holders who hold will be rewarded for their loyalty in supporting the project throughout the upcoming months.

OCTOBER

OCTOBER 7th
Solana Cross-chain DEX launch

OCTOBER 25th
Binance Smart Chain DEX launch

NOVEMBER

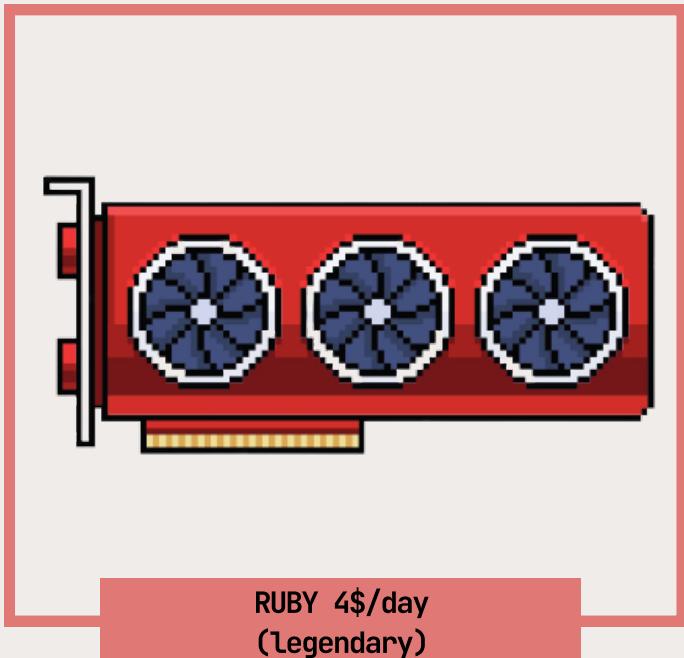

NOVEMBER 7th
Ethereum Cross-chain DEX launch

NOVEMBER 22nd
CEX Listing

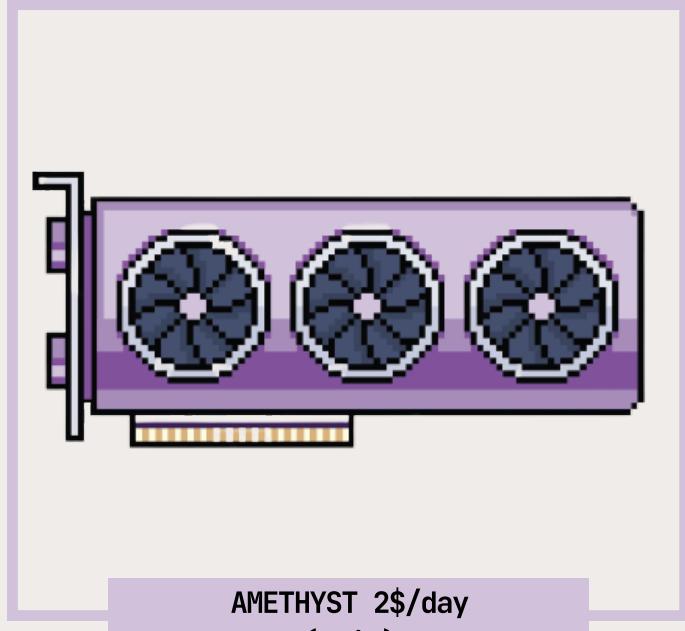

DECEMBER

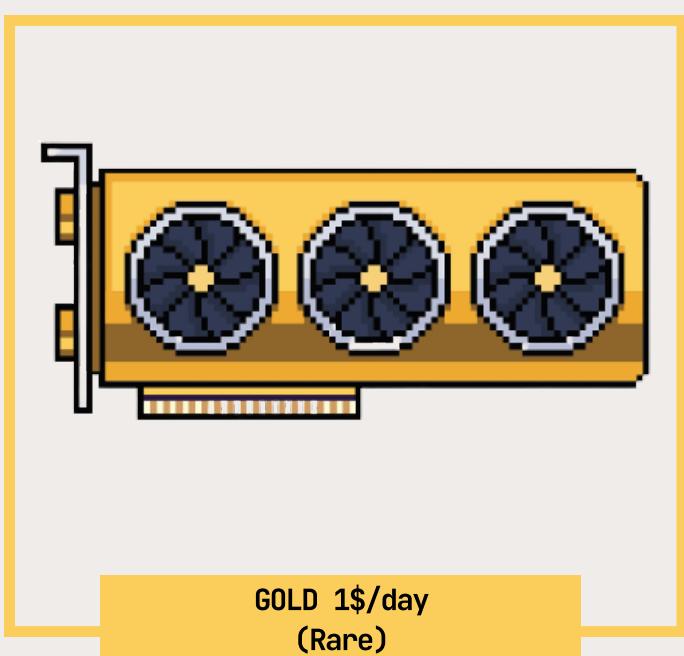

DECEMBER 25st
NFT Marketplace launch, all DONK Graphic card holders & stakers will be able to receive a 1.5% share of all market buys and sells of NFT's on the marketplace.

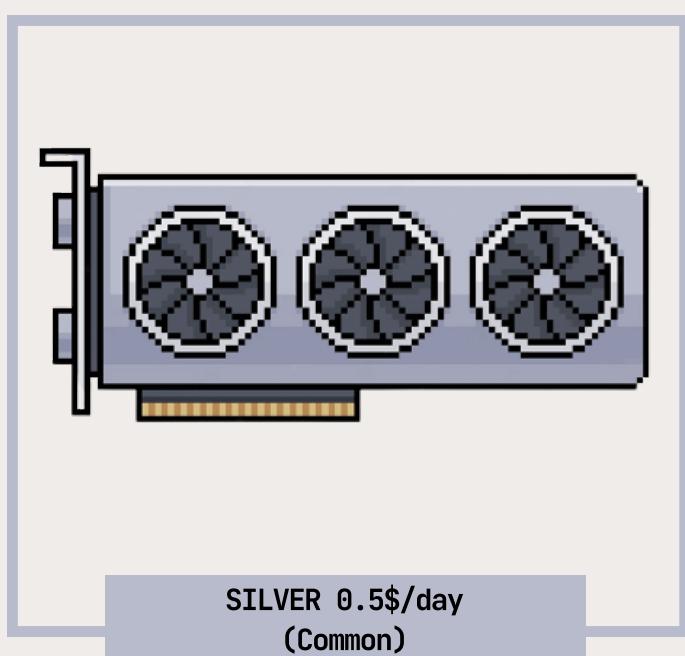

RUBY 4\$/day
(Legendary)

AMETHYST 2\$/day
(Epic)

GOLD 1\$/day
(Rare)

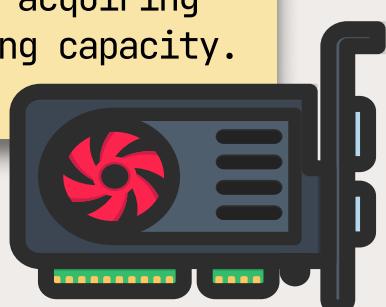

SILVER 0.5\$/day
(Common)

Mining Donk Coin with Graphic Card NFTs

Graphic Card NFTs can be utilized to mine Donk Coins through a process known as virtual mining. Each Graphic Card NFT is associated with a specific mining power, which determines the amount of Donk Coins it can generate over time. Similar to real-world mining rigs, users can assemble a virtual mining farm by acquiring multiple Graphic Card NFTs to increase their mining capacity.

Rarity and Value	NFT Integration within the DEX
<p>Graphic Card NFTs come in various rarities and performance levels, with higher rarity NFTs offering increased mining power and potential rewards. The rarity of these NFTs is determined by factors such as aesthetics, historical significance, and scarcity. Collectors and miners can engage in a vibrant marketplace where Graphic Card NFTs can be bought, sold, and traded, creating a thriving ecosystem around these virtual assets.</p>	<p>The Donk Coin DEX seamlessly integrates Graphic Card NFTs into its ecosystem, allowing users to leverage their virtual mining farms to earn additional Donk Coins. The DEX provides a dedicated marketplace where users can trade their Graphic Card NFTs, further enhancing liquidity and encouraging user engagement.</p>

Benefits of Graphic Card NFTs The introduction of Graphic Card NFTs within the Donk Coin ecosystem brings several benefits to users. Firstly, it enables users to participate in the mining process without the need for expensive physical mining equipment. Additionally, it enhances the overall gameplay experience by adding a gamification element to the DEX, where users can collect and optimize their virtual mining farms to maximize their Donk Coin rewards.

HOW DOES IT WORK? WHAT ARE THE BENEFITS?

0.5 - 4\$ in rewards per day per NFT depending on its rarity, costing 30\$ to mint each NFT with a total supply of 9,000 NFT's split in the ratio of - 250 Ruby, 750 Amethyst, 2500 gold and 5500 silver GPU's respectively. These rewards will be distributed as a dollar equivalent based on the price of Donk when claimed at that moment, based on which NFT you have staked into the mining rig, and is convertible to DONK on a probability basis just like mining blocks in a blockchain. This is done in order to maintain the coins price and inflation and protect its holders.

We will also be creating holder tiers for holding a certain number of NFT's per person which will give you exclusive perks such as free mints, access to airdrops, discord chats and more.

Holders will receive 1.5% fees of all NFT marketplace transactions once the marketplace is launched. Projects on various blockchains can list their collections on our marketplace and NFT holders will receive a share of all fees generated.
